

Chosen Apps

1. Schedule meetings with your teachers.

I am not entirely sure how I am going to achieve this app. I wanted to link the app to a person's finalists and email. The student would select the teacher from your class list. Schedule a meeting and both you and the teacher would be given a confirmation in your emails to finalize the details. Once finalized the student would get a notification along with the teacher about the location, time, and possibly with the option of adding the event to one calendar. You will have access to all faculty in the directory.

2. Randomly assigns new songs to you everyday.

Would pull songs from a database or possibly Spotify from a list of top the billboard top 100 for the last 3 years across genres selected by the user upon initial use. genres. The user would open the app and be treated by a new song every 24hours the user has the option of adding the song to their playlist.

3. That plans out your day.

A day planner that links a students finalist and calendar to include sports requirements, community service requirements and meetings.
